## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Fisher (USPN 5,376,878).

Fisher discloses an apparatus for counting and measuring the size of particles that comprises a membrane 10 containing multiple apertures 12 (considered constricted from main fluid flow) providing the only means of continuity between two fluid reservoirs 16 and 18. Electrodes 20 and 22 mounted one in each reservoir and another electrode 14 situated inside each aperture forming part of the wall. The position of electrode 14 effectively divides the aperture into two aperture regions 28 and 30 having similar electrical resistances. In use a conductive fluid containing (different electromagnetic and optical properties than particle) the particles is placed into reservoir 16 and aspirated through the apertures into reservoir 18.

## Conclusion

Application/Control Number: 10/092,576

Art Unit: 1743
